

Other Features

1. These baskets are designed to be used in mechanized stores, etc. and may be used by desk and overhead conveyors.
2. These baskets keep their quality in -50~ +50 centigrade temperature range and have excellent strength for frequent transportation, industrial consumptions, etc.
3. These baskets may be applied with or without cap and their cap has been designed in a way that in both cases of with or without cap, they are placed on each other easily. The baskets have no opening outwardly to prevent penetration of dust and/or disturbing animals.
4. Design of the baskets is in a certain way that a combination of different basket sizes may be placed on each other.
5. The baskets to transport heavy shipments have additional handle which facilitates handling by two people.
6. Due to the existence of special holes, sealing the baskets individually or in groups is made easily.
7. The aforementioned baskets have a location at one side to place labels of good specifications and another location at the perimeter to install tags.
8. These baskets are manufactured by using heavy polyethylene and master batch paint and auxiliary substances to make resistance against sunlight (UV). Therefore, they do not suffer from paling and/or shallow and deep cracks.
